FIG. 6

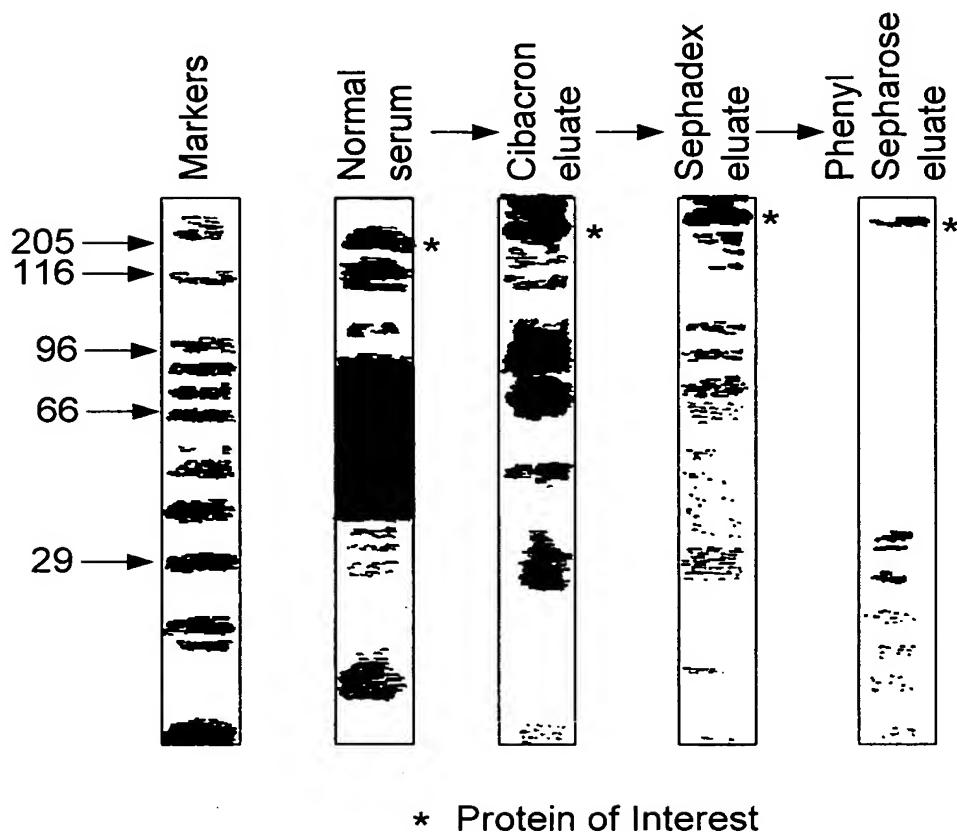

SDS-PAGE profile of partially purified rat serum protein fraction bound to conA sepharose-4B.

The ~ 200 kDa rat serum protein was partially purified through DEAE ion-exchange column and concentrated in centriplus-100 HR filtration unit. This partially purified material was further fractionated in the matrix bound fraction by incubating with conA sepharose-4B.

FIG. 7

One-dimensional SDS-PAGE of the fractions at each step after passing them through each of the three columns used to purify the protein. Fractions of interest from each column were pooled to be run in the next column.
